ENERGY PROGRAM MANAGEMENT

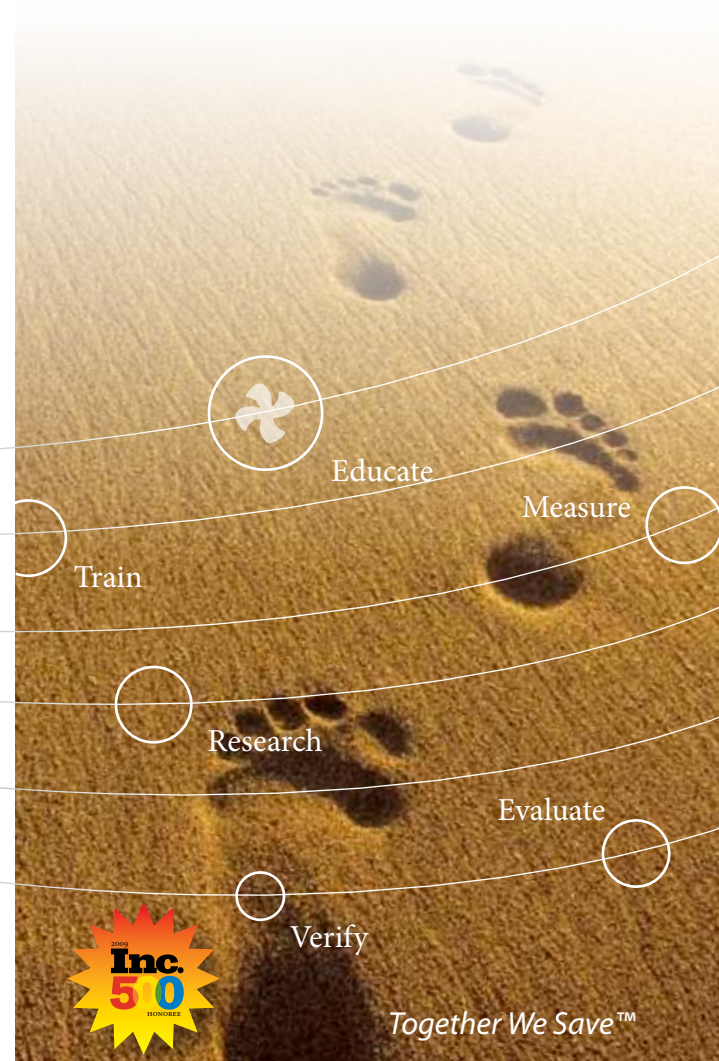

Managing Every Step of Your Program

Sophisticated and Innovative to Make Energy Savings Happen.

Together We Save™

MARKET TRANSFORMATION

Bring Your Energy Efficiency Program Forward

Our Services & Key Consulting Activities:

About Us

Enalasy Corporation is one of the leading companies working with utilities implementing and managing large energy efficiency programs. We provide measurement and data verification services, enabling contractors, utilities and government agencies to work toward meeting their energy efficiency goals. Enalasy provides intelligent diagnostic verification software and sophisticated data gathering solutions that manage and allow utilities to maximize their energy efficiency and demand response programs.

In addition to working with utilities, Enalasy offers unique investment and training opportunities for contractors through a variety of services and access to advanced equipment and technologies. Training is provided on new diagnostic and measurement equipment and technologies, data collection, diagnosis of system applications in homes and small commercial facilities, repair and maintenance of systems and use of the Enalasy software platform.

Enalasy has developed and patented core technologies like the **eOne Portal™** (a proprietary data platform), that is widely used among utilities. **greenNet.com™** hosts the **eOne Portal™**, bringing the first **Third Party Quality Control Program** (approved by the California Energy Commission) and is believed to be the only one of its kind in the nation. Enalasy and its partners benefit from expense savings in areas such as warranty costs, claims and call-backs while increasing consumer satisfaction. **This diagnostic data collection process makes it possible to develop and manage mass-market transformation programs, reports and process rebates faster and more accurately than any other program in the country.**

Research and Development of New Products and Technologies

Enalasy will work with utility program teams to research, test and bring new products and technologies into their portfolios. Enalasy routinely conducts market research while working with key manufacturers on the design and development of new energy saving products and diagnostic and measurement technologies.

Program Management

Enalasy will work with utilities and program implementers on all elements of program management. This includes program design, implementation, development of written policies and procedures, ongoing program management, quality assurance, third party quality control and reporting. The HVAC and Whole Home expertise we possess has led to the successful implementation of utility programs and energy savings goals for numerous Best in Class utility HVAC programs.

Program Data Management and Verification

Utilizing the most sophisticated data collection and verification software and practices, Enalasy provides utilities with state of the art data management tools. These tools provide real time data gathering solutions and verification services that allow utilities to maximize energy savings while documenting all facets of data management. Enalasy also provides auditing services that are used to validate jobs performed by contractors to insure quality service and performance of work.

Measurement and Evaluation

Through our sophisticated data collection process, we provide utilities with tools to measure energy savings and validate program results to meet Measurement and Evaluation standards and methodologies. Our HVAC and whole house industry experts are utilized to provide technical support and ongoing feedback in the preparation and review of M&V reports and studies. Our expansive database capabilities provides volumes of real time data that supports energy savings claims to help in the M&V study of energy efficiency including HVAC and Whole House.

HVAC Consulting, Education and Training

Enalasy provides general HVAC and Whole House utility consulting, contractor education and training for all aspects of program design, implementation and ongoing management of utility programs. Our program experts provide education and training in the use of diagnostic and measurement equipment, data collection processes, diagnosis of systems applications, repair and maintenance of systems in residential homes and small commercial facilities.
